**TANDY COMPUTERS SELECTED
FOR SUPER BOWL MEDIA CENTER**

Tampa, Fla. -- Before and after the game, sports writers at the 1991 Super Bowl will be using Tandy® portable computers to relay game highlights and articles to their newspapers, magazines, radio or television stations.

At the request of the Professional Football Writers Association, Radio Shack® has equipped the National Football League Media Center with Tandy® 102 laptop computers and dot matrix printers.

"I've used the product for years and it's been my experience that up to 90 percent of our writers use some form of the Radio Shack product. It's been the most durable and up-to-date product to fit our needs, and for as long as I can remember, it's been the model of choice for professional football writers," said Don Pearson, president of the Professional Football Writers Association.

According to the association's Super Bowl Task Force, the computers were chosen for their ease of use, durability, convenient size and weight, long battery life, and built-in internal modem.

Radio Shack, a division of Tandy Corporation, is the nation's largest retailer of personal computer and consumer electronics.

ROM WITH A VIEW

Dear Friends:

Portable 100 has a new publisher—me. Scary, huh? Well, it is for me. But it's a necessary step and, I believe, a positive one. It's time for some serious changes here, and I'm just demented enough to make them. We have a lot to discuss and not much space, so let's get started. Please pay close attention, because **this involves you!**

You long-timers know the trouble we've had delivering *P100*. For new readers, here's a short version: We've had some hard times and bad breaks. As much as Terry and I love this magazine, our readers, and our machines, we're more writers than businessmen. Readers have stood loyally by us, and we feel we owe them.

So I've decided, albeit reluctantly, to become the businessman (the "suit") we need to make *P100* survive and grow. So what do I do now?

I fix *P100*. Cut costs. Increase revenues. Expand coverage. And do other suit-like things to turn it around. Steps #1 and #2 are immediately apparent: We've adjusted (one last time) our cover date to March 1991 and switched to a less expensive paper stock. The savings let us put more than one issue "in the hopper" at a time, so that despite temporary fluctuations, we can ship REGULAR MONTHLY ISSUES which you'll receive in the month preceding the cover date.

Step #3: With more of you owning PC's and Mac's, someone's always asking how to make their Model 100-family computer work with their other machine. We're going to address that. And we'll take MS-DOS users by the hand and make that "DOS box" as easy to use as a "Model T." George Sherman already covers *DeskMate*, and this month, Tony Anderson launches his MOVING UP column to help you move painlessly from the Model 100 world to the PC world. Tony's well qualified.

Step #4: We will not slight the trusty Model T's. No way! They're still ideal for most jobs. (See this month's cover for proof!) As James Yi's *TEXT+* in this issue shows, their usefulness continues to increase. *TEXT+* alone is worth the cost of a year's *P100* subscription. It's one of the best Model T utilities I've ever found!

There's more, but I have a word limit. In brief, I'm gonna bust my newly-corporate lil' buns to grow *Portable 100* into the most important Tandy laptop peripheral you can own. Bigger and better. It'll be tough, and I'll need to be aggressive. Moreover—are you ready?—**YOU'RE GOING TO HAVE TO HELP!**

Here's what I need from you: First, I'll be telling advertisers it's worth advertising in *P100*. You must back me up! When something you need is available from several sources, buy it from our advertisers and thank them for their support. But don't stop there! Take one more step: Tell the competition you **didn't** buy from them because they don't support **you** and **your** magazine. Collectively, you have great power over advertisers, because **you're** spending the money they want. Vote with your dollars!

I also need your input. We read your letters and take them seriously. But I want more. Lots of 'em. Tons of 'em! Tell me what you like and dislike. Tell me what you want: new stuff, old stuff, Model T stuff, MS-DOS stuff, ideas, horoscopes, racing forms, whatever. Flood me with mail.

I want *Portable 100* to be your most important magazine—tell me exactly what will make it so. Your input, plus active support for advertisers (and active harassment of non-advertisers who are ignoring you), will help me to grow the magazine **YOU** want.

Good news: Look for some great "new" Model 100 products in next month's issue! Bummer news: Postal rate (and other) increases could force our subscription price back up to \$24.97/year, quite likely without warning. If you've thought of renewing or extending your sub—do it NOW!

Nugent

Toolbox

Manuscripts were typed into Microsoft Word 3.0 on a Tandy 1400 HD, where they were edited, spell-checked, and had basic format instructions inserted. From there they were loaded into a Tandy 4000 (80386 CPU, Tandy EGA Monitor, Tandy LP-1000 LaserPrinter) desktop computer and placed into Aldus' IBM PageMaker 3.01. Once there, design decisions on photo, figure, and listing sizes and placements were made. Here, pull quotes are placed, headlines, intros, and bylines are sized and positioned, and advertisements positioned.

Normally, the Tandy LP-1000 is capable of emulating only a Hewlett Packard Laser Printer Plus, but with the

addition of the Destiny Technology Corporation (300 Montague Expressway, Suite 150, Milpitas, CA 95035. (408) 262-9400) PageStyler 4.5MB kit, the LP-1000 is turned into a fully-compatible PostScript printer, with all 35 native fonts that are found in the Apple LaserWriter Plus printer. The Destiny PageStyler is available through the Tandy Express Order Hardware system.

Page previews were output from the Laserprinter. When everyone was satisfied with the appearance, final pages were output and artwork and lineart ads were positioned. The finished magazine was then delivered to the printer, who printed it, labeled it, and mailed it to you.

KEEP BIAS OUT OF PORTABLE 100

My thanks to *Portable 100* magazine for publishing excellent articles that are of great value to us loyal and dedicated users of Tandy's wonderful line of portable computers. I enjoy the magazine, even with its faults, not the least of which is the lateness of many of its issues. Nevertheless, most of the information contained is still of great value.

The late issue problem is a minor one compared to the continuous carping about Tandy and the out-of-place, off-color and politically biased snide remarks that Michael Daigle habitually feels compelled to include as "color" or perverted humor in his IDEA BOX columns.

So far in 1990 I have received six issues with the 1990 date: January through May plus November. Each of Daigle's columns in all but the March 1990 issue contains one or more snide, nasty, derivative, disrespectful and/or politically biased remarks about Tandy and/or Presidents Reagan and Bush, Vice President Quayle, and Republicans.

Except for the Model 100 line, Daigle seems to have a strong dislike for and bias against Tandy. Based on Tandy's outstanding success and the enthusiastic acceptance of Tandy computers by millions of satisfied customers, I must conclude that Tandy is more right and knows much more than Daigle does. It's obvious to me that Daigle isn't nearly as smart as he thinks he is.

Michael Daigle is entitled to his opinions and biases. But *Portable 100* should not be used as a platform for him to air his bad-taste brand of humor, his personal dislike of Tandy and his political biases. Let's keep all hints of bias and remarks in bad taste out of an otherwise fine magazine.

If Daigle persists in coloring his articles with biased and offensive remarks and *Portable 100* continues to provide him a platform for such remarks, I will have no choice but to cancel my subscription. I hope that such action will not have to be necessary.

Although Daigle may think so, I am not just a country hick from a small town in South Dakota. I am a retired Professor of Electrical Engineering, having spent

more than thirty years teaching at a respectable West-Coast University. I probably know more about computers than "know-it-all" Daigle does and I know something about common decency and respect.

**Prof. Harold J. Hendriks, Retired
Milbank, SD**

Dear Professor:

Thanks for taking the time to write. While it's nice to get fan mail, I also appreciate hearing from those who take a different view of my writing. I noticed that in your letter, you refer to my column as an "article." I think this may be a misconception on your part. An article is, hopefully, an unbiased piece of writing meant to convey factual information. I don't do articles. My column is an essay, a very biased verbal upchucking, a little slice of life in the strange lane. I like

*Although Daigle
may think so,
I am not just a
country hick
from a small town.*

to think of my writing voice as Andy Rooney channeling Rod Serling.

Still, I am grateful for your comments. While some might take offense at being criticized, the seasoned writer will see in a harsh critique the opportunity to re-evaluate his work in a new light and will, hopefully, find within himself the maturity to change and to grow, both as a person and as a writer. Thanks again.

Michael Daigle

PS: Dan Quayle really IS a pinhead. Trust me.

From the editor: Harold, I've always tried to keep P100 light and informal, reflecting my feeling that our lapwarmers are fun as

well as functional. I don't want it to be another stuffy, advertising-laden "catalog" like so many others (though I suppose I could live with advertising-laden!). Thus, I've actually published replies to letters to the editor (bad form, I'm told), was once accused of making P100 "cutesy" (guilty as charged, but I'm learning), and latched onto Mike Daigle. The "ex-hardware junkie" view in his earliest articles completely blew me away. Have you seen them? And his irreverent style was just what I sought.

I see his targets as the stuffy "suits" whose mental processes often seem at odds with the real needs of average people. Most visible, of course, are public officials (and who doesn't pick on them, regardless of party affiliation?) and, in P100's case, Tandy Corporation. Another magazine recently printed a letter wherein the writer took offense at an author's jabs at IBM. P100 is about Tandy laptops, and that's who we pick on.

I often disagree with Mike, but I'd hate to dictate his "opinions," just as I'd hate to lose you as a member of the P100 family. Tandy can take the heat, and so can we, if we all don't take ourselves too seriously.

Thanks for letting us know how you feel, Harold, and I hope you'll stay aboard. I also hope other readers will share their opinions with us, pro and con. (What do y'all say?)

-Nuge

P.S. Mike Daigle really IS a pinhead, too. Trust me.

FINDING MODEL 100'S

I really enjoyed *Portable 100* magazine. I would continue to subscribe, but I have a problem. I have several customers who use my desktop software. I also have software that runs on the Tandy Model 100. I have several prospective customers for my Model 100 software, but they are unable to find any Model 100's for sale.

Therefore, since additional Model 100's are not available, I can't see staying in that particular hardware area. I would appreciate any information, leads, tips, etc., on where to obtain Model 100's or used Tandy 102's. Thank you.

**Bob Schoeberl
Minneapolis, MN**

Gee whiz, Bob, there are plenty of Model 100's and 102's around! First, check with

Int/Ext's for Laptops/Desktops

some of our advertisers: Shreve Systems, Pacific Computer Exchange, Ultrasoft Innovations. Also check into GENIE's Laptops Roundtable and CompuServe's Model 100 Forum. I regularly see "for sale" messages for these machines, with average asking prices around \$175 for Model 100's and \$225 for 102's, depending on condition and extras. Remember to check our Portable 100 classified ads, and check into the Portable 100 BBS (phone number and TELCOM stats in our masthead). And of course, Radio Shack still sells Tandy 102's new.

By the way, what kind of software do you have for these machines? Perhaps some of our readers might find it useful. (And they already have the computers!)

-MN

"ABSOLUTELY RIDICULOUS" ERRATUM

In the interest of accuracy, and to give IBM their due, please note the following correction to my letter of November 6, 1990:

Obviously it is to many people; Tandy rates in the top four with Apple, Commodore, and IBM, and in recent months their personal computer sales are up 10 percent. However, it's not difficult to conclude that Tandy's skill in designing innovations has struck a poor balance with marketing for volume.

The source is Dataquest, Inc., showing shares of the US home computer market in 1989, as follows:

APPLE COMPUTER	24%
COMMODORE INT'L.	19%
IBM	13%
TANDY CORP.	11%
OTHERS	33%

(The growth figure quoted is attributed to Tandy, per Ed Juge, Tandy's director of market planning.)

How accurate the Dataquest survey can be, "based on 540 households using computers," I can't guess, but that's the machine that drives business, as you know.

Michael Synnott
San Diego, CA

MOVING UP

I have recently retired my Tandy 200 notebook computer. Actually, "retired" is a poor choice of words. I passed it down to my 22-year-old daughter, so it is not completely out of service, just fem-

NEED DESKMATE TIPS

This is being written on a Tandy 1100 FD. My business has me making lots of trips now, so I had to buy this one, because my wife, Linda, likes to use the Tandy 200 for her Girl Scouts. No disks to mess with—just turn it on and go.

But now that I have the 1100 FD I could use a column on using DeskMate. For a suggestion: a short article on what files should be on a traveler's disk. It seems that I

can only save the DESKTOP file to my A drive, but can't update my C:ROM drive. I did it once, but I don't recall how it was done. I'd like to put in a RAMdisk, but again, I don't know how to update the EEPROM.

As far as the DeskMate software, I wonder why I can't print a normal page of the spreadsheet. Currently, printing a spreadsheet only gives what is displayed on the screen. As any normal computer freak, I look forward to upgrading, such as an external 3.5-inch drive.

I just got a chance to use the 1500 HD. It is a sweet machine. It has a nice keyboard and screen. What gets me is that it has a 20 megabyte hard drive, a 3.5-inch floppy, and it weighs less than the 1100 FD. I'd get it if I didn't already have two machines.

I enjoy your magazine a lot, so keep up the good work. Keep your niche.

Jurgan Almlie
Baldwinsville, NY

Guess what, Jurgan—as you've no doubt already noticed, George Sherman has begun just such a series on DeskMate. I'm sure that after seeing your letter, he'll do his utmost to solve your problem. Stay tuned, and we'll fill you in, "BY GEORGE!"

Niche-wise, we'll continue to cover the Model T family. That's where our "roots" are, and those machines remain unmatched for convenience, simplicity, and ease of use. While we'll expand MS-DOS coverage, we won't do it at the expense of the Model T's.

-MN

"Dear Ed"

Our Zen master stumbles on the path to enlightenment.

To: Ed Juge
Director Of Market Planning
& Defender of the 1100FD
Tandy Corporation

Re: Recipes

Dear Ed:

Hello. You probably never expected to hear from me. After all, I'm the guy who said some pretty unpleasant things about the then-new WP-2 word processor and 1100 FD notebook computer.

For instance, you may remember that I accused the designers of the dark green screen with dark blue letters of owning stock in a seeing-eye dog business. I also hinted that the 1100 FD's keyboard was less than satisfactory by suggesting that typing on it was akin to tickling the dead.

You remember now, right, Ed? You were less than pleased with my observations. In fact, you even sent a letter to the magazine (which we published in full) defending the new machines. Remember?

You do? Oh. I was afraid you would. Because I recently became the owner of a new 1100 FD computer, and I ... uh ... well ... I guess it's all right ... well, (sigh), actually, I guess I kinda love it.

All right, Ed, knock it off. It's not THAT funny. All right, I'll wait until you stop laughing ...

... Ed?

... This isn't easy for me, you know ...

... Okay, Ed, that's enough. You're turning all red. That's better. Catch your breath, and I'll tell you about it.

When I wrote that first piece, I had only used the 1100 FD for a few hours. I was telling the truth when I said I didn't like the keyboard or the display. You may recall, however, that I raved about what an exceptional value the machine represented at its retail price of \$995.00.

Well, Ed, as you well know, the price (as of this writing) has recently dropped to \$799.00. The machine became a little more attractive to me. The Christmas sales brought the price down to \$699.00,

and I was starting to drool a little every time I walked past the Radio Shack store at the mall. Then came the Coupe de Ville (I don't know how to spell "coo de graw") ...

The local paper had an ad for a Radio Shack "3 day only" sale. Armed with the right coupon, any average citizen, even if he was unarmed, could get a brand new 1100 FD for only \$649.00! I couldn't resist. Secure in the knowledge that at 2/3 of the original price I could find a way to be a little more forgiving, I took my new 1100 FD home and prepared to alter my Zen-like mindset to accommodate using a computer that sported a keyboard and display that I wasn't crazy about.

Guess what, Ed? That's not what happened. What happened was, the more time I spent with the machine, the more I liked it. I discovered that the display, while still a little dark for my taste, worked well—very well—under a large variety of lighting situations, many of them far from ideal. The keyboard that I hated seemed better on the second day, and even better on the next day. By the end of the week I was hooked. Now, I have a hard time typing on anything else.

Go figure.

So all right, Ed, you got yourself a great little machine. You were right, and I was wrong. There. I said it. Happy? Are we friends now? Good. So, listen, Ed, now that we're friends and all, I have just one little comment ... *DeskMate* sucks.

Well, I'm sorry Ed, but it does—at least on a little single-drive laptop. I gotta swap disks every time I want to do something. And the built-in word processor? I gotta put a driver disk in just to *print* something? Ick. The word processor doesn't even count words. This makes it pretty hard on a writer.

But don't worry Ed—this isn't a hatchet job. It's actually not that big a problem. I've set the system to bypass *DeskMate* and go straight to the DOS prompt, just like a normal computer. I've been doing a lot of exploring, and I've made an amazing discovery: *Info Select*.

Ed, do yourself a big favor. Cut a deal with Micro Logic Corporation, the people behind the remarkable *Info Select*. Yank the *DeskMate* ROM and replace it with *Info Select*. Heck, just bundle *Info Select* with the 1100 FD. Whatever. If clothes make the man, software makes the machine. And *Info Select* is software extraordinaire.

This program is the new and vastly improved version of the former *Tornado Notes*. It's so powerful, so advanced, it's actually hard to describe.

The easiest way to get a conceptual grasp of the program is to think of it as an electronic desktop containing a pile of electronic Post-It™ notes. The process is simple. Press N, and a new window appears on the desktop. Into this window, type whatever you want. When you're done, press ESC twice. That's it—you've created an *Info Select* window.

Just to give you a hint of *Info Select*'s power, each window can hold up to 32,000 characters. And each desktop, or "stack," can hold up to 65,000 windows. Let's go over that again: 32K per window, 65 THOUSAND windows per stack.

Yee-haw, y'all!

So what can you put into a window? Anything you want. Addresses. Notes. Schedules. To-do lists. Facts. Figures. Information. Research notes. Letters. Articles. Stories. E-mail. Absolutely *anything* you want. So how do you find something when you want it?

Every keystroke in every window in your stack can be instantly searched. For example, press G to activate the *Get* command. Instantly, a graphic representation of your stack appears on screen, with several small blocks, one for each window, displayed. Let's say you're searching for the word "Wolverine." Type W. A couple of the blocks might disappear, windows that don't have a "w" typed in them. Next, type O. Some more blocks disappear, windows that don't have "wo" in them. Type another letter or two, and blocks continue to

Portable 100 BACK ISSUES

With over 60 issues, and hundreds of articles, *Portable 100* is THE source for information, programs, and applications for your Tandy Portable Computer. But how do you find what you need among all those issues? The answer is the **updated Portable 100 Article Index**. Covering every issue from September 1983 to the combined summer 1989 issue, the index is designed to make it simple for you to find what you need. And at a cost of only \$9.00 (postage and handling included), you should buy one today! If you have last year's index, don't despair. Update your index by adding our special 1988-1989 Update Index. It's a bargain at just \$4 (P&H included).

And what do you do when you find an article you want? Easy. First check the back issue chart below for back issue availability. If the issue is available, just order it using the handy order form (\$5.00 each, postage and handling included). If it isn't, don't despair. Photocopies of any article in a sold-out issue cost just \$2.50 each. Simply list the article, or articles, by title, author, and issue, enclose payment, and in just a short time you'll have the articles in hand.

vanish. Finally, only a few blocks remain. Press *Enter*, and all the windows that contain "Wolverine" appear in their own little pile, called the *Get* stack. The end result of your search may be something like this:

Joe Wolverine, Insurance Agent
555-BORE
123 Igottagalin
Kalamazoo

Book to buy: I Heard The Wolverines Call My Name by Willie Sellit
Synopsis: A dying monk is sent into the woods to spend the last months of his life in peaceful contemplation of the mysteries of life. About 20 minutes into the woods, a pack of frenzied wolverines rips him limb from limb.

Fong's Deli
555-AHSO
1492 Guess Who Sailed The Ocean
Blue Lane
Columbus
Comments: German/Chinese food. Eat there, and an hour later you're hungry for power. Makes great pickled wolverine.

Those three windows will be in your *Get* stack. Push the left arrow, and the view flicks back to your 200-note *All* stack. Press the right arrow, and you're

right back to your 3-window *Get* stack.

Info Select's (IS) rich list of features, its freeform, casual ease of use, and its ability to be used as an instantly accessible memory resident application all conspire to provide *Info Select* with a depth and a scope that I have never seen in a single program before. Believe me, my praise here does not do the product justice.

IS windows can hold pre-determined fields, so you can use *Info Select* as a conventional database. IS can export text, so it can be used as a word processor/text editor/e-mail generator. IS can import text, so it can cut and paste information from one application into a completely different one. IS can draw lines, so it can be used as a simple, easy to use form generator. IS can be used as a Rolodex™. As an appointment book. A memo pad. A calendar. A word processor, a form maker, a notebook, a phone dialer, a personal information manager, a research assistant, a reference tool, and on and on and on.

I wish I had more room to rave about this program, but I think the point is made: Here is a revolutionary program that is capable of transforming a humble little DOS box into a powerful tool that is defined only by the limits of the imagination of the individual user.

It is the single finest piece of software I have ever seen. Put this in the ROM of an 1100 FD, and you will have a Toshiba killer on your hands. Buy a copy for yourself, Ed, and see what I mean. *Info Select* is available from most national software chains, and retails for under \$100.00. They even offer a 30-day money-back guarantee!

That's about it for now, Ed. Since I don't have your address, I've asked Mike Nugent to forward this to you (after swearing him to secrecy. I mean, after what I wrote before, can you imagine how embarrassed I'd be if word of this got out? But I know I can trust Nuge.)

By the way, I named it "Farfel." I don't know why—the name just came to me while I was drinking some hot chocolate and nibbling a Nestle's Crunch bar.

Oh, speaking of food, I seem to have a large supply of crow in my freezer. Got any good recipes?

Your Pal,

Michael Daigle

Backpack A Drive to Your Portable

Add an external floppy disk drive to your Tandy MS-DOS laptop — without any hardware modifications!

By Terry Kepner

Finally, a way to read 5.25-inch disks with your portable computer! The MicroSolutions *Backpack*, featured on our December '90 cover, plugs into *any* MS-DOS computer with a printer port and gives it instant access to a 5.25-inch, without sacrificing your printer port. This means that you are no longer isolated from friends and colleagues with computers that use 5.25-inch disk drives; you can easily share data files and programs with them at a moment's notice.

Plus, you can still use your printer via the printer port at the back of the Backpack disk drive unit. If you want, you can make a permanent installation beside your printer, plugging in the disk drive whenever you need the printer (no cable swapping that way).

THE PACKAGE

The Backpack is actually a disk drive (either 5.25-inch or 3.5-inch) with an attached three-foot long cable that plugs into the standard DB-25 female connector all MS-DOS computers use as a printer port. The 5.25-inch unit is 10.5-inches deep by 6-inches wide by 2.25-inches tall, and weighs only 4 lb. 13 oz. (the external power supply weighs just 10 oz.). While it wasn't designed to be portable, its small size and weight make it handy enough to pack along during a trip. The 3.5-inch disk drive, for people who simply want a second floppy for their single-drive computer or access to 1.44 MB floppy disks, is smaller and lighter, but I didn't have a physical unit available to measure.

The disk drive comes with installation software and utilities to use the extra capabilities of the drive, on both 3.5-inch and 5.25-inch floppy disks. The software is self-installing, and easy to use.

SOFTWARE

Installing the software couldn't be easier: simply run the program *BACKPREP.COM*. It asks if you use a hard drive to start your computer, then asks what drive letter you use for the start up. The best feature of this is that after loading the *BACKPREP* program, you don't have to refer to the Backpack distribution disk again. All the utility programs are in memory (and only 128K is required), so there's no disk swapping required. Thus, simply place your start-up disk in the drive and answer *BACKPREP*'s questions to easily and quickly install the programs on your disk.

The programs installed are: *BACKPACK.SYS*, *BPFORMAT.COM*, *BACKFMT.COM*, and *BPDRIVES.COM*. The *BACKPACK.SYS* is the most important program, yet it takes only 10K of resident RAM to work. This program is installed in your computer's *CONFIG.SYS* file, if you're using one. If not, then the *BACKPREP* program creates one for you. The next time you start up your computer, *BACKPACK.SYS* will automatically load and test for the presence of the Backpack disk drive. If it isn't there (for example, you're working outside), the system tells you it can't find the drive and waits for you to press the *ESC* to acknowledge seeing its message (this can be turned off if you don't want it to wait for you). If it does find the drive, it tells you the drive letter assigned to it. This is handy, because it takes account of any RAM drives and hard drives you may have enabled. On my system it is given the drive letter *F*.

Once installed, all the standard DOS programs can be used: *DIR*, *FORMAT*,

The MicroSolutions Backpack External Floppy Disk Drive.

TREE, *COPY*, and so forth. As yet, I haven't found any that fail. You can even make the drive the default unit and run programs from it. We tested a 5.25-inch version of MicroProse's *Combat Copter* on the 1100 FD this way. It worked great with the CGA graphics, although some things were difficult to recognize on the LCD monochrome display.

UTILITIES

Should you miss the drive letter assignment message, you can easily check it with the utility *BPDRIVES*.

Another utility simplifies your many choices in formatting disks. *BPFORMAT* lets you create 360K, 1.2MB, 720K, 1.44MB and 2.88MB disks, depending on which model Backpack drive you purchased. In the 5.25-inch versions, you are limited to either the 360K format or the combined 360K/1.2MB disk format. The other formats are for 3.5-inch disks, and again you have two versions available, one for the standard 720K/1.44MB diskettes and the other for a special drive that adds the 2.88MB format to the other two.

Because I used the 5.25-inch drive, I will restrict myself to a discussion of those features only.

BPFORMAT works in addition to the standard *FORMAT* command supplied with MS-DOS. It includes special options such as starting format immediately without prompting you to insert a disk, skipping disk verification after formatting, initializing a previously formatted disk by simply clearing out the

Circle 6 on reader service card.

directory, copying system files to the disk after format, and asking for a volume label after format or initialization.

The next utility, *BACKFMT*, lets the drive format disks while you do other things with your computer. The first time you use it, it asks you to configure it for your special needs, which include changing the background access key (how you call it up while doing something else), how the system tells you it has finished formatting a disk (do nothing, beep, pop up a window over your application summarizing the format, beep and pop up a window), whether to verify a disk after format, and if you are using a color monitor. After answering these prompts, the program tells you how much RAM it is using (about 10.7K) and returns you to DOS to wait for your formatting orders.

If you intend to format a bunch of disks prior to a backup of your hard drive, or to make a series of backups of distribution disks you've acquired, this program is a real time saver.

You can, of course, select the format, limited by which drive you've purchased. Unlike all the other 1.2MB disk drives I've used, this one let me format a 360K disk as if it were a 1.2MB disk. It only formatted to 860K (the other 320K was rejected as bad sectors), but it effectively more than doubled my disk capacity without making me buy disks that cost triple the normal 360K price. I'm not sure how reliable the disk is in this situation, but it is something for me to experiment with in the future.

The final utility is not included with the *BACKPREP* program; instead it is on the distribution disk. Fortunately, it is a specialized program that will rarely be used more than once, if at all. Each Backpack drive is assigned a number from 1 to 100. If you purchase two drives, the

Make more use of memory

Put your Model 102/200 programs on an Option ROM

Putting programs on an Option Rom provides greater security for your programs, will often increase program speed, and will allow you to make better use of your programs memory for storing data rather than programs. Ideal for business, Police, and data collection applications. We provide a complete range of products and services to help you get the most from your laptop computer. Call us for:

- Cross development systems that let you convert programs developed on a PC in Assembler, Basic or "C" and download them onto an Eprom.
- Putting your program on a ROM.

- Eproms, Burners, Erasers, and Eprom Adapters (including solderless and socketed development adapters.)

- Eprom Burning and soldering services. Consulting.

odds are 100 to 1 that they will have different identification numbers, with whichever drive having the lower number being assigned the lower drive letter (i.e., if you have two drives number 23 and 58, the 23 will be assigned the first drive letter, E, and the 58 will receive next one up, D). In the event you receive two drives with the same number, or should you want to reverse the drive letter assignment, *SETID* will fix that problem.

SUMMARY

I like the little drive, and find constant use for it with the many programs I have on 5.25-inch diskettes (from before 3.5-inches caught on). Plus, I frequently purchase public domain software, which always costs lots more when supplied on 3.5-inch disks instead of 5.25-inch disks. I happen to know that the cost differential between the two is much less than \$1, so why should the 3.5-inch disks be so much more expensive? The only answer is greed on the part of the suppliers. Thus, the drive not only pays for itself in convenient access to 5.25-inch software, but it lets me buy cheaper software and actually saves me money. Not many products can do that!

Editor's note: Backpack external drives (and lots of other great accessories) are available from one of our advertisers: Microsense,

370 Andrew, Leucadia, CA 92024. See their ad on page 5.

TWPKIT for the WP-2:

Convert WP-2 .DO files to ASCII, WordStar, and WordPerfect formats, simply and easily!

by Gene Wilburn

The "Widg," as I've dubbed my Tandy WP-2, goes with me everywhere. I use it on commuter trains, on airplanes, at the cottage, and even in my easy chair at home. I compose the first drafts of all my freelance writing assignments with it.

Only a seriously dedicated masochist would do any extensive editing with the thing, however. Give me a "DOS" (MS-DOS) computer, a VGA monitor, and WordStar or WordPerfect for that job. The same goes for formatting and printing.

Unfortunately, converting a WP-2 file into something useful for further editing in DOS presents a few problems. The WP-2 does a poor job of file conversion. Its internally-created ASCII files do not contain the CR/LF (carriage return/linefeed) line endings required by DOS.

Worse, its ASCII upload facility through TELCOM inserts superfluous, highly undesirable, CR's at every 80th character (even in the middle of words), and there is no built-in facility for preserving underline or boldface attributes. Furthermore, in the opposite direction, the WP-2 does not clean out the DOS LF's (linefeeds) from a downloaded DOS ASCII file.

To overcome these limitations, I wrote some DOS-based utilities to convert native WP-2 .DO files to and from ASCII, WordStar, and WordPerfect formats. After testing them for my own use, I collected them together as a package called TWPKIT (for Tandy <-> Word Processing Tool Kit) and placed them in the public domain. They are free—there is no shareware charge for their use.

TWPKIT is available from two sources. It can be downloaded from Library 15 of the Model 100 Forum (GO M100SIG) of CompuServe where it is listed as TWPKIT.ZIP. (If you download it, you must use the DOS utility PKUNZIP to unpack the file before you can use its contents.) An unpacked, ready-to-use version is also included with the purchase of the WP2DOS transfer program from Club 100 (see their ad on page 1). [TWPKIT is also available on the Portable 100 BBS. See our masthead for BBS phone number and TELCOM stats.—MN]

only have to press the carriage return (ENTER) key. You may omit the extension .DO from the Tandy file—the program assumes it. If you omit an extension from the output file name, the program will automatically append .TXT for ASCII files, .WS for WordStar files, or .WP for WordPerfect files. You may also supply any extension you wish.

The dots show activity. A dot appears on the PC's screen for every paragraph it finds in the WP-2 file. The line after the dots is a convenience option for converting more than one file at a time.

There is an option to strip out control characters. WordStar users, however, may elect to embed control characters in their .DO files by using the undocumented WP-2 keystroke ^V (control-V) plus a control character, for instance, ^V^S for underscore and ^V^B for boldface. If you elect to <L>eave these, they will be carried into your WordStar file intact.

T2WP is writer-oriented. It keeps boldface, underscore, tabs, and the high-bit characters (e.g., foreign-language characters)—the principal features used in writing for publication.

It makes no attempt to preserve the page breaks, soft returns, margin settings, tab settings, centering, headers, or footers in the original .DO file. Most writers will prefer to do any special formatting in a PC word processor.

For WP-2 files that get converted to ASCII, underscore and boldface attributes are translated into visible markers:

```
<i> Begin italic (underlining)
</i> End italic
<b> Begin boldface
</b> End boldface
```

Figure 1. A sample session, converting a WP-2 file to ASCII with a line-by-line output and a maximum of 52 characters per line. Program prompts are shown in normal text; user responses are shown in bold. <CR> represents pressing the carriage return (ENTER) key.

The TWPKIT consists of three utilities, plus documentation. For ease of use, all the programs use a prompted interface, rather than command line options.

T2WP

The program of most interest is T2WP.EXE (Tandy to Word Processing). It converts WP-2 .DO files into ASCII, WordStar, or WordPerfect files.

A sample session, for converting a WP-2 file to ASCII with a line-by-line output with a maximum of 52 characters per line, would look like Figure 1.

When you select a default value, you

This notation is based on the text markup scheme suggested by the *Chicago Guide to Preparing Electronic Manuscripts* (University of Chicago Press, 1987).

One last note on T2WP. Its output file formats are currently limited to *WordStar 4.0* and *WordPerfect 4.2*. Future releases of T2WP will include the *WordStar 6.X* and *WordPerfect 5.X* formats.

WP2T

Every so often I like to take an existing word processing file and load it into the Widge to carry around for light editing or polishing. The WP2T.EXE (Word Processing to Tandy) program does this by converting ASCII, *WordStar 4.0*, or *WordPerfect 4.2* files to the WP-2 .DO format.

There are some cautions here. *WordStar* and *WordPerfect* have significantly richer file formats than the WP-2. A conversion to the WP-2 will only work well on simple files that have exact or near-exact matches. Underscore, bold-face, tabs, and extended graphics characters all translate well. *WordPerfect* hyphens are converted to standard hyphens.

If a *WordStar* or *WordPerfect* file has a lot of embedded formatting information, the best strategy is to convert it to ASCII first, using the WS or WP utilities.

Another caution is that the DOS file cannot be larger than what the WP-2 can hold in memory—22K max.

LASCII

The final program in TWPKIT is a DOS utility that converts line-by-line ASCII files into one-paragraph-per-line ASCII files. LASCII stands for "long ASCII" because of the long lines it creates. Some folk I've met call this "flat ASCII."

I use LASCII to prep DOS ASCII text files for use in the Widge when I want to preserve paragraphs as logical units. Another caution is in order, though: it mashes lists.

FILE TRANSFER

All the programs in the TWPKIT are DOS programs and run on a PC, not on the WP-2. Conversion takes place on the PC. A WP-2 file must first be transferred to a PC before it can be converted. A newly created .DO file on the PC must be transferred back to the WP-2.

A standard way to transfer files is to attach a null modem cable between the PC and WP-2 serial ports and use the Xmodem protocol of both TELCOM and a DOS communications program like *Telnet* to do the transfer. The docs that

accompany TWPKIT explain this in more detail.

A more elegant way to transfer files is to purchase a copy of Chris De Herrera's WP2DOS program from Club 100 (see their ad). WP2DOS makes the PC look like a Tandy Portable Disk Drive to the WP-2. Transfers become unbelievably convenient, and as a bonus, the WP2DOS disk includes TWPKIT.

You still need a null modem cable, even with WP2DOS. If building your own doesn't sound like a fun exercise, you can pick up the necessities at Radio Shack, or you can purchase an excellent null modem cables from Club 100.

CONCLUSION

If you wish to exchange files between your WP-2 and your desktop word processing system on a regular basis, you will find this works well if you do not expect the WP-2 to be more than it is—a simple electronic notebook. To gain maximum synergy from your two systems all you have to do is follow one basic rule: KEEP THINGS SIMPLE!

Gene Wilburn, a Toronto-based MIS manager and freelance writer, is the author of TWPKIT for the Tandy WP-2. His CompuServe ID is 72435,732

by design

The only real **DEAL** for RAM expansion!

Add our rugged cartridges to your TANDY laptop and you have a combination which is truly portable, easier on your pocketbook and **DOES THE JOB!** The RAMPAC, which is diagrammed on the left offers easy changeability and small size. Any number of RAMPAC's can be shared with any number of Model 102 or 200's. A built-in 3+ year lithium battery (Duracell DL2430) is user replaceable and protects data whether plugged into the laptop or not. Guaranteed the most cost effective RAM, the RAMPAC for the M102 or M200 sells for **\$149** in the 128K size and **\$199** for the 256K byte size. The DATAPAC, which is diagrammed below is securely fastened underneath and to the back of the laptop with Velcro™. The DATAPAC is more permanently attached and the wedge shape acts as "prop" legs for easier display viewing. It has been recently redesigned to double the former capacity

and has a slimmer housing. The DATAPAC for the M100 or M102 sells for **\$169** for 128K, **\$219** for 256K, **\$259** for 384K, and **\$289** for 512K. All prices include one copy of RAMDSK software, one year warranty, 20 day satisfaction guarantee and UPS air shipment (in continental US). The RAMDSK software, by Paul Globman, uses 1.3K of main RAM, can coexist with most option ROMs and displays a single directory bank with over 200 files possible. All file types (.CO,.DO,.BA) are easily and rapidly transferred between main RAM, freeing it for larger documents and programs. For BASIC programmers, special calls allow automated file transfers and multi-program "chaining".

¹RAM file storage as compared to disks provide enhanced laptop portability: Smaller size & weight. Much longer battery life with resulting convenience and lower cost. More reliable with no moving parts to wear out. Faster operation and resistant to harsh environments.

²More computers than RAMPAC's require extra RAMDSK.CO software at \$25 each.

Filer and Address Book

George looks at two of DeskMate's major programs.

by George Sherman

In my last article I said that we would next look at three of the major programs that come as part of the *DeskMate* package: *Filer*, *Address Book*, and *Calendar*. However, I find that I have so much to tell you about these that it's impossible to cover everything in the space allotted. Therefore, this installment will cover only *Filer* and *Address Book*, and I will devote the next installment entirely to *Calendar*.

FILER

Filer consists of three parts: *Form Setup*, with which you design the format of the "card" or "page" in which you'll enter the information; *Filer Report*, with which you design the format of the reports of be obtained from the information entered; and *Filer* itself, which presents you with the pre-designed card or page ready for you to enter information.

"With (*Filer*), you can keep records of any kind using custom-designed forms. Once you have entered information in a *Filer* database, you can locate and sort records based on criteria you set, and generate reports that contain information in the layout you specify in *Form Setup*."

In designing your card or page, consider the information which will be most useful to you. Make the page pleasant to look at or functional, whichever you prefer. Don't be afraid to experiment. If you don't like what you've done, you can either kill the whole file and start over, or move items around on the screen until it satisfies you. It's up to you. You'll find that *Filer* and its related program, *Form Setup*, are two of the most usable programs you'll ever come across.

You may enter cosmetic text, or even graphics, if you're handy with *DeskMate's Draw* (to be covered in a later installment). You can place the entries anywhere on the screen, label them to the

left or above, or completely hide the labels, whichever you prefer. You can place borders around each item. You can designate whether the labels are to appear in plain, bold, or underlined text. You can choose whether a particular entry is to be alpha or numeric. And you can put format characters in the entry fields, such as dollar signs, commas, decimal points, slashes, or any other character you choose, to keep from having to type them each time. A field designated as alpha will accept any character, even numerals. A field designated as numeric will accept only numbers. Another nice feature is that if a decimal point is placed in a numeric field, any number entered will be placed in the field to the left of the decimal point until you type the "." Any subsequent entry in that field will then be placed to the right of the decimal point. If you do not type the decimal point, *Filer* will automatically include 00 for any number which does not have a decimal value. The number of columns you designate to the right of the decimal point determines the precision of your numbers.

DESIGNING REPORT FORMS

Once you have designed your form you may, if you wish, design the report form. After pulling down the menu for *Report*, or pressing F5, choose *Define* by either placing the cursor over the word and pressing *Enter*, by pressing the first letter of *Define* and then pressing *Enter*, or by placing the mouse arrow over *Define* and clicking twice. The *Report Setup* screen is divided into four portions labeled, from top to bottom: *Header*, *Body*, *Summary*, and *Footer*. To detail all the possibilities in this particular area would make this report too lengthy. Suffice it to say that you can size each section; include titles and/or graphics in the header; include similar information in

the footer; place any field which you want included on your report in the body in any location you prefer; and use the summary portion to summarize, total, count entries, or whatever you choose. After you have set up your report you can than preview what it will look like on a printed page in miniature. I have used this option many times to determine that what I thought would look good looked absolutely terrible when all bunched together, necessitating a complete re-do of my report arrangement.

Now the hard work is done. From here on, operating the program is pure joy. The main operating program is, of course, *Filer*. When you call it up, or transfer to it from *Form Setup*, you are presented with a screen representation of your card with the cursor waiting for you at the first prompt. Simply type in your information and press *Tab* to move to the next field, or *Shift-Tab* to back up a field. To add a card press *Ctrl-A* and your completed card is automatically stored and a new screen appears. Each card is stored in the order completed unless you subsequently sort them into a different order. *Filer* remembers your last sort and presents the file to you in that order each time until told to sort into some other arrangement. At the lower right of the screen appear four buttons labeled *First*, *Next*, *Prev*, and *Last*. These buttons are used to move among the records in the file. If the button is not usable it is shaded. For example, if you are already at the first record in the file, the *First* button is shaded.

When you have several records established you can sort, find, create subsets, etc. In other words, you can manipulate the file in any way you choose. If, for example, I want to list all bills I must to pay, from a file entitled appropriately, *Debts*, I ask *Filer* to find all records in this file where the *Amount* due is equal to or

T-200 Enhancement

XOS (Cross bank Operating System) will enhance your Tandy 200 and allow the three banks to share programs and data. XOS will bring a new level of computer functionality at the MENU, from BASIC, TEXT, and TELCOM.

From the Tandy 200 MENU you will be able to enter memos, rename files, set alarms, display and run programs that are in other banks, and much more.

Cut TEXT from one bank and PASTE it to a file in another bank. Open a "window" while editing in bank #1, and view other files from bank #2. Disable "word wrap" while editing for another perspective of your TEXT file.

While on-line with TELCOM, display FILES and Bytes Free, enter and edit TEXT files, or jump to another RAM bank without losing the host computer connection.

BASIC programs can read/write to files in other banks. Jump to programs in other banks or bring the program into the current bank and run it.

XOS provides fundamental database entry and retrieval functions with user defined fields, prompts, and display parameters. A bargain at

\$24.95

Node Datapac Users Replace your ROM!!

RAMDSK.CO will replace the Node ROM and allow you to use one of those other ROMs you've always wanted. Retain all of the Node menu functions, plus the ability to move, kill, and name Datapac files under program control. A MUST for Node Datapac owners who have other option ROMs. RAMDSK.CO is available for the M100/M102 and T200... only

\$24.95

N-READ.CO will allow a BASIC program to read a TEXT file stored in the Datapac without moving the file into RAM. An absolute necessity for multi-file database projects where the databases are kept in the Datapac. N-READ.CO is only \$9.95 but is yours for \$5 when ordering RAMDSK.CO.

For Your Amusement...

A beguiling PUZZLE/GAME program for your Tandy 200. A logical challenge that will keep you busy for many hours. Only \$10.00 for PUZZLE #3. Order with XOS or RAMDSK.CO and I'll send three additional puzzle/game/maze programs for your Tandy 200, at NO EXTRA CHARGE.

Software shipped on PDD1 (100K) diskette. All prices include shipping. Send your order with check or M.O. to:

Circle 121 on reader service card.

greater than \$.01. When the extraction has been done, *Filer* presents me with the first record in the file which meets that criteria. I then move to *Reports* and request that a copy of this subset be sent to my printer. What I get is a printed page listing all of my bills in alphabetical order, with the amount due for each, and at the bottom of the page, a total of the whole amount. (This can be a very humbling experience!)

ADDRESS BOOK

"*Address Book* is among the most powerful prestructured databases in existence. It features preorganized forms, cross-referencing, mailing label and form letter printing capability, the ability to print its contents to a file, and powerful sort, search, and indexing capabilities. These features, combined with *Address Book's* ties to the *Phone List* accessory, give the *Address Book* just about everything you need in a 'people' database."

Believe me, this program is excellent. When initiated, the user sees an address card with fields preset for Title, First (name), Last (name), Address (not labeled), State (not labeled), Zip Code, Company name, Work (telephone), Home (telephone), Dates to Remember, and

Notes. The graphic depicts the card as similar to a loose leaf in an address notebook, complete with punched holes. The page itself is divided into three sections with the top half containing the first nine fields, through Home telephone. The bottom is divided in two with Dates to remember already set up as Birthday and Anniversary, and Notes, which can be used for anything. I like to list the children's names, or spouse's names in this field. The bottom right section of the page is titled Member Of and lists all the various groupings of which this particular address card is a part.

The left one-third of the screen has a window entitled Index and contains an alphabetical listing of the names entered in your address book, depending on how you are viewing them. As you enter addresses into your *Address Book* you may assign them to various lists. And you may assign a particular address to more than one list. For example, I have some names that are on a "Family" list, and others on a "Friend" list. Most, if not all, of these names are also on a "Christmas" list.

Address is also tied into the utility *Phone List*, which is accessible by pressing F10 from anywhere within *DeskMate*. Any phone number entered in

your address file is available in *Phone List* and, if properly set up, may be dialed from that utility. Suppose, in the middle of a program operation—even writing this article—I decide to call *Portable 100* magazine's editor. I press F10, choose *Phone List*, move down through the list until I find "Nugent, Mike," tell *Phone List* to dial the number there, and just like an automatic dialer, the number is dialed for me by the computer.

In many ways *Address* is similar to *Filer*, with one major exception: Where *Filer* maintains many different records, each accessible as you wish, *Address* maintains only one file, *PERSONAL.ADR*. However, because you can assign addresses to different "lists" and call up those individual lists, you get the effect of having multiple files. The major advantage of this arrangement is that all lists are part of the "All" list. Choosing that view gives you the entire list of addresses in your file.

Unless otherwise stated, all quotes contained in this and future articles are from the book, *Getting the Most Out of DeskMate 3* by Michael A. Banks, a "Brady" book, published by Simon & Schuster, Inc., 15 Columbus Circle, New York, NY 10023, Copyright 1989 by Michael A. Banks.

PORTABLE POWERHOUSE

~~(\$3000 original retail)~~

ONLY \$495!

(\$795 with portable printer and disk drive)

Hewlett-Packard's HP110 Portable

Includes word processor, Lotus 1A, built-in modem, communications software—and a ONE-YEAR GUARANTEE!

Hewlett-Packard's HP110 Portable was way ahead of its time.

An MS-DOS machine (version 2.11), the HP110 stores programs and data on ROM chips. The rugged unit weighs only 8 pounds, has a 16-line screen, and has enough available memory for more than 80 pages of word processing text.

With up to 20 hours of continuous use per battery charge, the HP110 is ideal for business travel.

At only \$495 used, our HP110s make great gifts for students, friends, and spouse. Note: With most other com-

puters, used means worn out. But there's little that can wear out in an HP110, because there are no moving parts except for the keys.

Every HP110 we sell is fully tested and is guaranteed against malfunction for one full year. All units come with a 30-day no-risk trial and free technical support. For details or to order, call (800) 373-6114. Call now—offer good only while supply lasts!

COMPATIBILITY: Tandy 100, 102, 200 only.

TEXT... Plus!

Supercharge your lapwarmer's built-in TEXT editor!

by James Yi

The built-in TEXT editor on the Model 100/102 and Tandy 200 is perfectly adequate for light editing jobs. But what if you've gotten into more intensive editing? What if you've felt the urge to reach for function keys that, alas, just aren't there? Don't you wish they were? Well, TEXT+ can fill that "functionality void" and make your wish come true! Here's a list of TEXT+ features:

- **Word Wrap Disable**—Word wrapping at the ends of lines in TEXT is normally automatic, but TEXT+ lets you toggle word wrap on and off.
- **Overwrite**—The Tandy notebooks are normally in insert mode, where characters you type are added to the text file and existing characters are pushed over to make room. Overwrite mode lets you type over existing characters, replacing them with the characters you type. TEXT+ lets you toggle between insert and overwrite modes.
- **Append Paste**—Normally, text that you cut or copy into the paste buffer replaces text that was already there. With TEXT+, however, if you hold down the SHIFT key while cutting or copying, the text will be appended to what's already in the paste buffer. When SHIFT is not pressed, cut and copy work as normal, replacing what's in the paste buffer.
- **Backward Text Search**—A string can be searched from the current cursor location to the *beginning* of the file instead of end of the file.
- **Search and Replace**—TEXT+ lets you find a string and replace it with another string. It can automatically replace every string it finds, or you can have it pause at each find to let you selectively replace them. If you want to search and replace only within a portion of text, you can specify a local search block by highlighting the block with the F7 (Sel) key. Optional case sensitivity lets you search for exact matches only.
- **Place Marking**—You can put up to 9 markings and return to those markings with quick two-key strokes.
- **Cursor Position Reporting**—Lets you know where you are relative to the beginning of the file and shows the column and row position of the cursor.
- **Block Deletion**—Lets you select a block of text and delete it without affecting the paste buffer.
- **Paste Buffer Dumping**—When you get a *Memory full* message while trying to paste something, this feature lets you get around that.

GETTING STARTED

To get started, you need to run the BASIC loader program (Listing 1—Model 100/102, Listing 2—Tandy 200) to create the two .CO files, TXPDAT.CO and TXPINS.CO. For compatibility

```

with other .CO programs you might be using, *TXPINS* can be created to run at any address you choose; specify the address of the last byte of *TXPINS*, plus one, when the loader asks you for the *END* address. Just pressing *ENTER* at this prompt will set the execution location for *TXPINS* to right below current *HIMEM*. If you are not sure of what value to specify as the *END* location, just press *ENTER* and it will run safely. Since *TXPDAT* doesn't actually run, it need not be relocated, and you need not specify an address for it. After those two .CO files have been created you can store away the loader.

Next, make a configuration file, *TXPCFG.DO* (Figure 1). This file contains default setups that will configure *TEXT+* every time you install it. As shown, it is set up so that all features will be installed. Later in the article, I'll explain how you can customize it. If you don't use the configuration file during installation, all features will be installed and defaults set up in a standard way.

Then run *TXPINS.CO* to install *TEXT+*. If you run it and it just gives you a beep or ?OM error, you will need to change the computer's *HIMEM* setting. To do that, go into *BASIC*, type *LOADM "TXPINS"* and press *ENTER*. See what *Top*: value is displayed, and then set *HIMEM* to this value by typing *CLEAR 0,Top* (whatever value *Top* is).

The first time *TXPINS.CO* is run, if all is well, it will display progress messages for each function installed. *Size* indicates how many bytes a function takes up. When finished, it asks, *Clean up?*. Press *Y* to delete the files *TXPINS.CO*, *TXPDAT.CO*, and *TXPCFG.DO*. Press *N* if you don't want them deleted automatically.

After installation, the *TEXT* entry on the computer's main menu will change to *TEXT+* to indicate that *TEXT+* is installed.

IF YOU HAD TROUBLE

If all did not go well, there are 3 possible ways it could have gone wrong:

1. Not enough memory—The program needs about 2K of free memory to install all features.
2. File directory full—There are too many files in the file directory to hold *TEXT+*. Delete some files and try again.

3. **BASIC** programs need to be removed—Because **TEXT+** is a machine language program, it needs to reside at a fixed location. The installer will try to bury it in the lowest location possible in memory, so that changes to other files will not affect its memory location. Having **BASIC** programs present during installation prevents it from doing this, so that if you later edit one of these **BASIC** programs located below **TEXT+**, the location of **TEXT+** will be affected and something horrible will happen. (Tandy 200 LOMEM program users: Its location will also be affected when you change the LOMEM value. Be aware of programs that put things in LOMEM. Problems with LOMEM can be avoided if you install the programs that reside in LOMEM before installing any programs such as **TEXT+**, which is a pseudo-BASIC file occupied by machine language codes. If you already have **TEXT+** installed and want to install a LOMEM program, remove **TEXT+**, install the LOMEM program, then reinstall **TEXT+**.)

A PEEK INSIDE TEXT+

When Microsoft wrote the ROM for the Model 100 and Tandy 200, they provided software traps at various places in the ROM so that later on, users could insert their own code into it and expand it. **TEXT+** hooks itself onto one of those traps to make possible what it does.

Actually, there is no trap provided for the specific purpose of expanding the **TEXT** capability, but there happens to be a trap provided in a routine that **TEXT** calls every time you type a key. However, that routine is also called every time you type a key from anywhere else—from **BASIC**, **TELCOM**, the main menu, etc. So in order to avoid executing the **TEXT+** functions when you are not in **TEXT**, **TEXT+** first examines the stack to see if the routine was indeed called from **TEXT**, before acting upon a keystroke. This idea was first suggested to me by Paul Globman, whose **XOS** software and articles you have seen in *Portable 100*, and who used the same idea in **XOS** to expand the function keys at the Tandy 200 main menu.

And that is how **TEXT+** invokes itself to carry out its functions, by hooking into this trap and examining the stack.

TEXT+ REMOVAL

Whenever you want to remove the program, run **TXPINS** again. (You do not need **TXPDAT** and **TXPCFG** for removal, but you will need them again for re-installation.) If while trying to remove it, you get a message something like *Vector \$xxxx is used*, it means some other program has changed information at that memory location after **TEXT+** was installed. **TEXT+** cannot be removed unless that vector is restored with the value that the installer put in. If you get a message that says *Above files need to be removed*, it means other pseudo-BASIC files were installed after **TEXT+**. In that case, they must be removed first, before **TEXT+** can be removed safely.

CUSTOMIZING TEXT+

If you want all the features installed and are happy with the defaults as they are, then you needn't use configuration file **TXPCFG.DO** at all. However, by changing **TXPCFG** you can change the default state of the features, the keys that control the features, and even omit unneeded features to save memory. Here's how.

Specifications are contained in "configuration boxes," the rectangular brackets ([]) shown in Figure 1. There are two boxes for each function, one to indicate whether the function is to be installed or omitted, and another to specify its default parameter. In the *Install* box, put Y to install or N to omit. In the *Parameter* box, there may be one, two, or zero parameters to set. [-] indicates there are no parameters to set.

In function #4, for example, [B] indicates that <ESC>, will be used to do a backward search. You could change it to, say, [F], if you prefer to use <ESC>, <F> to initiate that action. In function #1, [1,W] indicates that <ESC>, <W> will be used to toggle word wrapping on/off, and number 1 indicates that the word wrapping will initially be enabled.

MISCELLANEOUS

Most functions are toggled with the escape sequence, that is, pressing <ESC> and then another key. The bottom line of the screen will then indicate with an up- or down-arrow whether it's been turned on or off.

The configuration file as shown is about 4K, but note that there are comments included within the configuration data. Once you've grown familiar with it, you can, if you wish, delete those comments to save space, reducing the file to about 1K. You may delete any line that does not begin with a number or the > symbol.

Continued

1. Word wrap: <ESC>,<?>
>Install: [Y]
>Parameters: [1,W] — 0=disable, 1=enable
2. Character overwrite: <ESC>,<?>
While in overwrite mode, pressing <SHIFT> with <SPACEBAR> lets you insert a space.
>Install: [Y]
>Parameters: [0,O] — 0=insert, 1=Overwrite
3. Paste buffer append: <ESC>,<?>
Holding down <SHIFT> when you press <F5>(Copy) or <F6>(Cut) temporarily reverses the default setting. So if the default is "normal", pressing <SHIFT>+<F5> appends selected text to the paste buffer.
>Install: [Y]
>Parameters: [0,A] — 0=Normal, 1=Append
4. Backward Search: <ESC>,<?>
>Install: [Y]
>Parameters: [B]
5. Search & Replace: <ESC>,<?>
Can be done on the whole file, or on a selected portion. Use <F7> to select the portion that you want to do "local" search & replace on. If no text is selected, it will be done on all text after the cursor. If you want to abort it when it asks for "Pause?" and "Case?", press <CTRL>+<C>. If

you want to abort it when it's in the process of doing automatic search and replace without pause, press <SHIFT>+<BREAK>.

>Install: [Y]
>Parameters: [S]

6. Unload paste buffer: <SHIFT>+<PASTE>
Pressing <SHIFT>+<PASTE> empties the paste buffer content to the file, for the situation in which there isn't enough memory to paste as normally. You could use this function another way, to insert text at the beginning of the current paste buffer content; move cursor to end of text to insert, do <SHIFT>+<PASTE>, extend highlighting, and cut.

>Install: [Y]
>Parameters: [-]

7. Show cursor position: <ESC>,<?>
Turn on the LABEL by pressing <LABEL> and you'll see the cursor's coordinate on the screen, and the offset from begin of the file of the text it's pointing to. Cursor movement becomes sluggish when it's being shown, so you may want to turn LABEL off most of the time and turn it on only when necessary.

>Install: [Y]
>Parameters: [1,C] — 1=on, 0=off

8. Marking: <ESC>, [<TAB>], <0 to 9>

To place a marker at the cursor, press <ESC>,<TAB>, and a number from <0> to <9>. <0> is special in that it redistributes the markers 1-9 at evenly spaced intervals throughout the file. To get back to the location where you placed the marker, press <ESC> and then <0> to <9>. <0> is special; it takes you to the previous cursor location just before last event, like Pasting, Finding, CTRL-Z (Down Arrow), and exit, reenter and immediately doing <ESC>,<0> takes you to the location just before the previous exit.

>Install: [Y]
>Parameters: [1,T] — Cursor tracking: 1=on/0=off

<ESC>,<T> turns cursor tracking on/off. You may want to turn it off if the cursor movement feels sluggish. Tracking allows automatic adjusting of markers as you edit the file. If it's off, markers shift and lose their position as you insert and delete text preceding them.

9. Block delete. To delete a chunk of text, select it using <F7>, and press <SHIFT>+. It's like cut operation using <F6>, except that the text cut is not stored in the paste buffer. Handy if you want to delete a large block of text but don't want to affect the data holding in the paste buffer.

>Install: [Y]
>Parameters: [-]

Figure 1. TXPCFG.DO lets you customize TEXT+ to your personal tastes. Change default states, activation keys, and even omit unwanted features to save memory.

TANDY WP-2 MEMORY

128K \$74
32K \$17

Improve your memory! Add a 32K or 128K ram disk to your WP-2. The 32K part is exactly the same as Tandy's at a significantly lower price. The 128K part has the same low-power characteristics of the 32K part. Battery life is not a problem! Prices include S&H, installation instructions, 90-day warranty. CA residents add 6.00% tax. Send check or money order to:

MicroMime
P.O. Box 28181
Santa Ana, CA 92799

CIS 70346,1267 MCI 200-3496
Fax (714) 545-1765

S-T-R-E-T-C-H

your floppy disks with

MAXI Disk

Are you tired of running out of space on your MS-DOS floppy disks? **MAXI Disk** can give you 420k on a 360k drive, 800k on a 720k, 1.4 meg on a 1.2 meg and 1.6 meg on a 1.44 meg. Of course, **MAXI** also formats normal DOS disks (360/720/1.2/1.44).

\$19.95 (US), \$22.95 (CDN), plus \$2.00 postage & handling from:

Horne Data Systems Ltd., Box 250
Tiverton, ON, CANADA, N0G 2T0

ULTRASOFT HAS 'EM!!! WE'VE GOT 'EM ALL!!!

The Hard-to-Find Accessories,
Software and Peripheral Solutions You Need
For Your Laptop, Notebook, and Palmtop!!!

*We Support the Following Models
by Telephone, Fax, or Mail Order:*

Tandy 100/102/200
Tandy WP-2
Tandy 1100 FD
Tandy 1400 LT/FD/HD
Tandy 1500 HD
Tandy 2800 HD
Panasonic CF-150/170/270
Atari Portfolio
Poqet PC-Computer
T.I. Travelmate 2000/3000

We Also Carry:

The Kodak Diconix 150+ Portable Printer
and the Canon BJ-10e Portable Printer

We've got those hard-to-find:

Carrying cases for Laptop & Printer,
and overseas 220V & 240V AC Adapters
In Stock for all you globetrotters, too!!!

WE HAVE THE SOLUTIONS FOR ALL YOUR LAPTOP, NOTEBOOK AND PALMTOP NEEDS!!!

Call, Fax, or Write Today
for a FREE Catalog

Please specify the Make and Model of your Laptop, Notebook, or Palmtop.

Dvorak Keyboard System

Give your laptop the Rolls-Royce of keyboard systems. The Dvorak key arrangement eliminates wasted motion, reducing finger travel by more than 90%! Type faster and more accurately. There's less error, less fatigue. And learning to type is much easier on a Dvorak keyboard. No Hardware! Uses less than 500 bytes of RAM. Works in BASIC, TEXT, TELCOM, etc., just like it came from the factory that way! (Tandy 100, 102, 200 and NEC-8201) \$36.95—Portable Disk Drive Disk. \$39.95—Standard Tape Cassette.

One-handed Keyboard!

Special Dvorak one-handed keyboard uses the same efficient design principles as the above system, and makes typing faster and easier for people who have the use of only one hand. Less fatigue and more work! Just like the above software, it is small, simple to use, and works in TEXT, TELCOM, BASIC, etc., and commercial software without any hassles. Your computer acts like it came from the factory with a one-handed layout. And you can switch between the one-handed layout and the original (two-handed QWERTY) layout by pressing a key. \$36.95—Tandy PDD disk, \$39.95—Standard tape cassette. Please specify left or right-handed version when ordering.

TMN Assembler

from Tri-Mike Network East

This assembler requires less than 3K RAM and is relocatable. It assembles source code from any file or device; accepts data in hex, decimal, or ASCII; creates a ready-to-run .CO file directly on the Menu or an optional trial assembly. Six built-in macros make programming even easier. Output all or any portion of the assembled listing to screen or printer, with optional user-inserted pauses. Manual includes extensive RAM and ROM maps! (Model 100/102, 200, NEC 8201/8300) Cassette version only—\$39.95

TMN Debugger

from Tri-Mike Network East

Who ever heard of an assembler without a debugger? TMN offers one to use with the above assembler. Model 100 and 102 only). \$36.95—Portable Disk Drive. \$39.95—Standard Tape Cassette.

Continued.

CRDFIL-PC

CRDFIL is now available in a version which runs in a PC or PC-compatible computer, which is fully compatible with datafiles created by or used in a Model 100/102. Additionally, files created with the PC version may be transferred to, and used by, the Model 100/102 versions.

Virtually all of the Model 100 features have been implemented in the PC version, with the addition of enhancements available within the PC environment itself. These include faster sorting, faster card access and sicplay, Help messages and instructions on-screen, plus some options not available in the Model 100/102 versions due to lack of screen display space.

The PC version was designed primarily with PC laptops in mind, but can also be used in a standard desktop computer as well.

CRDFIL-PC is available on 3.5-inch of 5.25-inch disks, and may be used directly from the disk or placed in its own subdirectory on a hard disk system. The program is an .EXE program, which runs directly in the PC by typing CRDFIL at the DOS prompt. It can also be executed by many popular menu programs. An extensive menu system within CRDFIL guides you, step by step, through the program. Most options are similar to (and based upon) those found in the Model 100 version.

CRDFIL-PC is available on disk for \$24.95, postpaid, and includes helpful instructions in a disk-based manual. It assumes you are already familiar with the Model 100 version. There will be a \$5.00 credit to previous purchasers of the CRDFILROM, and it will be offered as an added option to future Model 100 version buyers.

For more information, contact T.A.F.T., Post Office Box 60925, Reno NV 89506. Or circle #60 on your Reader Service Card. (ery).

The Export "T" attaches directly to the printer port on any computer. An auxiliary printer connector is provided on the adapter.

Export "T" External Hard Drives

Systems Peripherals Consultants has begun shipping the new Export "T" Series of external hard drives for both laptop and desktop computers. Since it utilizes the parallel (printer) port, the Export can be used universally as a primary or secondary (backup) high speed storage device, as well as a data transport device between different computers. The current low-profile lightweight units consist of 3.5-inch drives ranging from 20 to 207 MB, with access speeds from 15 to 28 ms.

A "T" connector allows for simultaneous hard disk/printer operation. A device driver is supplied which will function

with removable cartridge drives, Bernoulli boxes, CD-ROM's, and magneto-optical drives. Computers supported include any PC/XT/AT, 80386, Micro Channel, and, of course, laptops.

Drives are shipped with an AC power supply. A battery option is available or customer-supplied 12-volt DC may be used.

Prices start at \$595.00 for the 20MB drive. Dealer inquiries welcome. For more information, contact Systems Peripherals Consultants, 7950 Silverton Ave., Suite 107, San Diego, CA 92126 (619)693-8611. Or circle #61 on your Reader Service Card.

PC-Kwik Products from Multisoft

PC-Kwik Power Pak is a set of interconnected programs that enhance the performance and convenience of PCs. The combination of Power Pak's disk cache, print spooler, RAM disk, and screen and keyboard accelerators provides great performance improvement. Once installed, your keyboard and screen are more responsive, the time spent waiting on printers is reduced, and all disk activity is dramatically faster. Power Pak runs under DOS version 2.0 or later. It operates behind the scenes while you work, speeding up your complete computer system. At the center of Power Pak

is Super PC-Kwik version 3, an advanced read and write disk cache, as well as an integrated RAM disk and print spooler. Because they dynamically share memory with Super PC-Kwik, you do not have to allocate memory to a RAM disk and print spooler before that memory is actually needed. Screens and keyboards are also accelerated.

Suggested retail price is \$129.95. For more information, contact Multisoft Corporation, 15100 SW Koll Parkway, Beaverton, OR 97006 (503)644-5644. Or circle #62 on your Reader Service Card.

Enhancements for your 100/102/200!

extRAM is a 32K byte read/write memory expansion that fits into your Tandy's internal option ROM socket, 100% portable!

As a **RAM-file-bank**, you can double your space for .DO, .BA and .CO files. Our new, improved system software hides in the extRAM itself. It offers you new, exciting capabilities, and it is cold-boot proof too! Adapted from original software, SLX and EXTBAS, © 1989 by Paul Globman.

As a **ROM-file-bank**, or **emulator**, you can load extRAM with the kind of software that normally resides on ROM chips. But no more physical chip swapping! You swap in new ROM images on command, from files stored on disk or RS232. Software R2D2X © 1990 by Wilson Van Alst.

The software comes with each extRAM in the form of listings in a 38 pg. manual. A program disk or tape is also available, to save typing..

COMPATIBILITY: All MS-DOS computers.

Moving Up: Chapter One

This new series will help you "move up" to MS-DOS with minimal hassle.

by Tony B. Anderson

For a long time, there has been a large group of Model 100-family users who have resisted, sometimes adamantly, moving into the MS-DOS computer world, preferring the true portables, the Model 100, Tandy 102, and Tandy 200 and like machines. I use the term "Model 100 family" as a generic description to include those true battery-operated portables produced by Kyocera, and sold by Tandy/Radio Shack, NEC, Olivetti, and Kyotronic.

In my position as forum administrator of CompuServe's Model 100 Forum, I've watched many users "graduate up" to PC's, and particularly to the current generation of PC laptops, like the Tandy 1100, 1400, 1500 and others. In many cases there is a period of adjustment from the simplicity of the Model 100 family to the PC world.

On the forum, we are often asked if anyone knows of a program for the PC that is as simple to use, or which performs some simple task common in the Model 100 world, but which is not as gargantuanly complex as similar PC programs, or which may not even be available in the PC world.

There are valid reasons to "move up" to a PC or PC laptop computer, including more power, greater speed, the ability to use programs with more features, or to achieve compatibility with job or business-oriented tasks—compatibility with the business world. I will not dispute that the Model 100 family serves a lot of users well. They are ideal first computers for beginners and those who wish to learn programming. Their portability aside, they are pretty decent little computers and will do a lot of jobs extremely well.

I myself have used a Tandy 200 for 95 percent of the support on the Model 100 Forum for the past six years, and a Model 100 before that. But there are many

things that simply can't be done effectively in the Model 100-family computers (maintaining large databases of membership records, library catalog files, etc.). I eventually had to get into the PC world to handle that kind of work for the Forum. (But I went kicking and screaming, all the way!)

There comes a time, however, when many users tend to look enviously at the PC world, which doesn't suffer as many limitations as the RAM-starved Model 100 family. Many of those users come back to the Forum, or back to the Model 100, for the simplicity of use, or for the

The Model 100 family serves a lot of users well. They are ideal first computers ...

efficacy of specific programs which are not available in the PC world. A few have expressed the wish that the PC's were as easy to use as the Model 100.

And that is going to be the thrust of this series of articles: making the PC, especially PC laptops, *as easy to use as the Model 100*.

WHERE WE'RE GOING

In this series of articles, we're going to cover a lot of ground based on the concept of moving up from the Model 100 family to the PC world ... understanding the differences, building a software base,

and making as easy a transition as possible. We're going to cover technical differences only sparsely, mainly as they relate to applications, and will be taking a user's viewpoint, rather than a technical viewpoint. We're going to figure out ways to make the PC's as easy to use as possible, as the Model 100 family is. We're going to eliminate as far as possible the techno-babble that is so common in the MS-DOS world, and look at everything from the non-expert computer user's view. There are lots of places for those who are technically inclined to gather information, but few sources of *user-oriented* information, guidance and support. Especially from the angle of moving from the Model 100-family into the PC world. (Although I have been involved in several discussions as to whether using a PC was actually "moving up." One Model 100 owner indicated he is involved in the MS-DOS world at work, and to him, "moving up" meant moving to the Model 100, which is simpler to use and more rewarding.)

To this end, these articles will discuss a minimum of technical information and a maximum of application-oriented information. Each article will describe specific areas of PC use which correspond to Model 100 use, such as text programs, telecommunications, databases, BASIC programming, and similar subjects.

Each month I will also offer one or more pieces of shareware software selected on the basis of ease of use and/or similarity to Model 100 simplicity. These will generally include specific configurations or configuration information which will make them ready-to-run in their recommended "Easy, Model 100-Simple" form. You won't have to hunt through extensive documentation files, looking for the setup options to make the

WPduet

The Macintosh connection to the Tandy WP-2 Portable Word Processor

WPduet turns the Tandy WP-2 into the affordable portable keyboard for your Macintosh. With the battery powered, four pound WP-2, you can work on your documents anywhere. Then, you can transfer your documents to your Macintosh with **WPduet** for final editing and printing.

Cabochon, Inc.
1740 Massachusetts Avenue
Boxborough, MA 01719
508/264-4648
508/263-9627 FAX

WPduet provides error free transfers of your documents and converts them to MacWrite II or Rich Text Format for use with Microsoft Word, Microsoft Write or WriteNow 2.2.

WPduet comes complete with everything you need to use the WP-2 as a portable keyboard for the Macintosh: software, manual and cables. Find out how easy portable computing can really be.

Macintosh is a trademark of Apple Computer. MacWrite II is a trademark of Claris. WP-2 and Tandy are trademarks of Tandy. Cabochon, WPduet are trademarks of Cabochon. Microsoft, Microsoft Word, Microsoft Write are trademarks of Microsoft. WriteNow is a trademark of T/Maker.

Send check or money order for

Circle 9 on reader service card.

program easy to use or start.

There will be a nominal distribution charge for the shareware disks to cover the cost of the media and shipping, generally six dollars. You should be aware, however, that the distribution charge only covers those costs and does not feed back to the program author. Paying the distribution cost is not the same as paying the author for the program, who is entitled to be paid for his efforts, too.

Shareware is based on the principle that you "try it before you buy it." If you decide you like it and want to continue to use it, you should make a payment to the author for the right to do so. Generally, shareware is priced much more reasonably than similar commercial software. We're particularly looking for inexpensive programs that suit our goal of making the PC's easier to use. Authors of such programs deserve to be rewarded for their efforts, and they often offer additional incentives, such as printed manuals, later versions of the program, and technical support for that payment. I urge you to support the authors of the programs you use.

We will also discuss, where appropriate, commercial software that fits our conceptual criteria.

SO WHERE DO WE START?

Obviously at the beginning—with the

rudiments of the PC, the basics you need to know in order to make the PC as useful as your Model 100 has been.

There are obvious differences in both

There are valid - reasons to "move up" to a PC

the hardware and software, and many subtle differences, too. Aside from the obvious (additional RAM space, faster speed, larger screen, additional features) there is the greater capability—graphics, built-in disk support, and in the desktop group, many, many special purpose cards, add-ons and equipment. All at a price, of course. If you can afford it, you can do almost anything you want with a PC... even the garden variety, bare bones systems that start in the low hundreds of dollars. By adding on, building it up, you

can make any of these as useful as even the highest priced models on the market.

This series will concentrate on moving up to the PC laptop class of computer, although generically the information will apply to all PC's. We will favor the Tandy PC laptops, the 1100, 1400, and 1500; PC XT-class machines, which are currently priced within range of Model 100 owners, and in some cases are priced lower than the introductory prices of the original Model 100's. The 1400 HD, which includes a 20 megabyte hard disk, a 720K 3.5-inch disk, and 768K of RAM, is currently priced just about the same as the initial Model 100 with 32K of RAM! (Even less by mail order.)

THE WRAP-UP

One problem in covering this subject with a series of articles is that it will take months for readers to arrive at the fully-configured machine. I will be happy to answer questions sent to me via CompuServe's Email facility (send to 76703,4062) or by mail (please include a self-addressed, stamped envelope). My mail address is: Tony Anderson, P.O. Box 60925, Reno NV 89506.

Next month: Specifics on MS-DOS and some starter shareware.

COMPATIBILITY: Model 100, 102, and 200 (sometimes others, with changes).

The Call of the Wildcard

While Marlin Perkins stays in the boat, Globman goes overboard.

by Paul Globman

When searching a data file for text matches, sometimes you don't know the EXACT match you want, or you may wish to locate partial matches. For example, suppose you had a data file with dated information, where the date was in the MM/DD/YY format.

And let us further suppose that you wanted to locate a group of data records which were dated from 01/01/89 to 01/31/89. The use of "wild cards" in the match string would allow you to select 01/??/89, and extract the correct group of data records.

This routine (Listing 1) expects the match string to be M\$ and target string to be T\$. They must both be defined before calling this match routine. Upon return from this routine, the variable FOUND (FO) is true (-1) if a match exists, and false (0) otherwise.

Within M\$, ! will match any upper or lower case letter, # will match any digit (0-9), and ? will match any character.

Incorporate this into one of your application programs

Run this program and experiment by entering different TARGET and MATCH strings. The TARGET string would have the exact text (as would the data file), and the MATCH string would have the "wild cards." Once you observe the way this routine works, you will probably want to incorporate it into one of your application programs (that accept user input and searches for matches).

Additional notes: Variable names P0 thru P4 were chosen so as not to conflict with variables used in elsewhere in your program. Make changes as necessary but use caution. Also, the routine is NOT case insensitive for exact letter matches, but could be made so.

□

Paul can be reached by modem on CompuServe (72227,1661) and GENie (P.GLOMBAN), or by mail at 9406 N.W. 48th St., Sunrise, FL 33351 (please enclose SASE if you're requesting a reply).

New LOW Rates!

Businesses—90¢ per word
Non-business—60¢ per word
Find those items you need, sell the ones you don't, start a business inexpensively!

HOW TO PLACE A CLASSIFIED AD

Categorize your advertisement (Hardware, Software, Services, Wanted, Etc.) and carefully type your message. We are not responsible for correctly interpreting handwritten advertisements. Phone numbers, street numbers, dimensions, and any abbreviations count as one word. Logos, company or product, are not allowed, neither are display advertisements. Business rates are 90¢ per word; non-business rates (individuals advertising) are 60¢ per word. Add up the cost and send the advertisement copy with a check, money order, Visa, or Mastercard number to: Portable 100 Classifieds, 145 Grove St. Ext., P.O. Box 428, Peterborough, NH 03458-0428, c/o Linda Tiernan. Make checks payable to Portable 100 Classifieds. Include your complete return address and phone number (phone number is printed only if it is included in the advertisement itself). Materials due the 1st of the month, two months prior to the magazine cover date (example: materials for the February issue must be received by December 1st.) Advertisements received after the deadline will appear in the next scheduled issue. Payment must accompany order. No refunds for advertisements that miss deadlines, regardless of reason. We reserve the right to change advertisement categories, and to reject, edit, or cancel any advertisement we deem improper. There are no agency discounts for classifieds. **For faster service call 603-924-9455.**

FINGERS TIRED?

*Accomplish more... in less time.
Get the P100-To-Go program disk.*

Make your life easier! Save hours of time from typing in lengthy programs. Never worry again about typing errors. Have more fun with *Portable 100's* new disk-of-the-month service. Every program from the magazine is included on each month's disk. No typing. No trouble.

We make it easy and inexpensive. You deserve value. At *Portable 100* we believe in value. That's why we're not only making each month's programs available on 100K Tandy Portable Disk Drive disks (which work in 200K drives), we're also

making sure any extra room on each disk is packed with interesting and fun bonus programs. All files are in .DO format. Ready to load. Ready to go.

Not just for the Tandy 100. The *P100-To-Go* disks will work with any computer that uses the Tandy Portable Disk Drive, the Brother FB100, and the Purple Computing Portable Disk Drive. This means your NEC-8201/8300, Tandy 100/102, Tandy 200, Olivetti M10, and Kyotronic KC-85 can all load these programs into memory (once loaded, changes for specific computer models may be required, refer to corresponding program article for information about compatibility with particular computers).

Subscribe and save! You can order *P100-To-Go* disks individually at only \$9.95, but for maximum savings sign up for our **Six-pack Special**, one disk each month

- ☐ **Yes!** Save me hours of typing time. Sign me up for your **Six-pack Special** (6 monthly disks of the *Portable 100* programs, plus the special bonus programs included with every disk) for only \$47.70.

SUPER ROM

Lucid Spreadsheet Write ROM Database Outliner

NOW YOU CAN REALLY HAVE IT ALL!

All on one ROM. Truly the finest four programs available for the Model 100 — guaranteed. Try it for 30 days. If you aren't blown away by the excellence return it for a full refund.

\$199⁹⁵

The four best programs for the Model 100 all on one ROM. 32K of power without using any RAM for program storage. This is the PCSG Snap-In ROM that just presses easily into the little ROM socket in the compartment on the back. You access the four right from the main menu like built-ins.

Write ROM — the definitive word processor for the Model 100. Function key formatting or dot commands. Search and replace. Library feature — inserts words, phrases or whole documents into text from just a code. MAP lets you see a picture of your document. In all there are 60 features and functions. No one can claim faster operation. FORM lets you create interactive forms with on-screen prompts that you can answer from the keyboard. Nothing else for the Model 100 compares with the features of Write ROM. Exactly the same as the Write ROM sold as a single program. Infoworld says it "makes the Model 100 a viable writing unit ... sur-

passed our highest expectations for quality and clarity."

Lucid Spreadsheet: This is the one PICO magazine says "blows Multiplan right out of the socket" and Infoworld performance rated as "excellent" and said "makes the Model 100 compute." Gives you features you cannot get with Lotus 123. Lets you build spreadsheets in your Model 100 that would consume 140-150K on a desktop. Program generating capability with no programming knowledge required. Variable column widths. Includes find and sort with function key control. It's fast, recalculates like lightning. No feature has been taken from the original, only new ones added.

Database: This is a relational data base like no other. You can do everything from mailing lists to invoices. No complicated pseudo-coding, you create input screens as simply as typing into TEXT. You are not limited by size; you can have as large an input screen as you wish. Prints out reports or forms, getting information from as many files as

you like. Complete math between fields. Total interface with Lucid worksheets.

Outliner: Does everything that Think-tank does on a PC but a whole lot better. Includes a Sort for your headlines. Lets you have headlines of up to 240 characters. Has cloning, hoisting and sideways scroll up to 250 characters. Like Lucid, this one sets a new standard for outliners. This is the way to plan and organize your projects.

Present Lucid and Write ROM owners can upgrade for \$150. If you have both it's \$125.

As usual PCSG sells the Super ROM on a thirty day guarantee. If for any reason you are not satisfied, simply return it for a full refund.

We are excited about this product. Super ROM gives the Model 100 the true power of a desktop. No other multi-program ROM has software that compares. But don't take our word for it. We invite you to make that comparison yourself. Priced at \$199.95 on Snap-In ROM.

Got stuck with somebody else's multi-ROM? We'll upgrade it for \$150.
